AN AMERICA
WE ENVISION IN WHICH A LEGACY OF ECONOMIC SECURITY AND EDUCATIONAL SUCCESS PASSES FROM ONE GENERATION TO THE NEXT.

TWO-GENERATION PLAYBOOK

ASCEND
THE ASPEN INSTITUTE
Almost **HALF** of all children in the United States live in low-income families.

**Return on investment** in education for children AND their parents is high.

Two-generation approaches put the WHOLE FAMILY on a path to economic security.
WHAT IS A TWO-GENERATION APPROACH?

Two-generation approaches provide opportunities for and meet the needs of children and their parents together. They build education, economic assets, social capital, and health and well-being to create a legacy of economic security that passes from one generation to the next.

We all want to see families thrive, but fragmented approaches that address the needs of children and their parents separately often leave either the child or parent behind and dim the family’s chance at success. Placing parents and children in silos ignores the daily challenges faced by parents who are working or studying while raising a child, a challenge even more pronounced for those with low wages.

Research has documented the impact of a parent’s education, economic stability, and overall health on a child’s trajectory. Similarly, children’s education and healthy development are powerful catalysts for parents. Two-generation approaches help both generations make progress together.

Where is your work on the two-generation continuum?

- child-focused
- child-focused with parent elements e.g., parenting skills or family literacy
- whole family
- parent-focused with child elements e.g., child care, work supports, and food and nutrition
- parent-focused

“My children have learned to focus on school because I am doing the same. They motivate me to create a better life for our family, and I want to show them what is possible when you work hard.”

- Tameka Henry, mother; former Policy Committee chairperson, Acelero Learning Clark County; Board Member, National Head Start Association
CORE COMPONENTS

We believe that education, economic assets, social capital, and health and well-being are the core components that create an intergenerational cycle of opportunity. Quality early education for children and postsecondary education for parents are central to approaches that move the whole family toward economic security.

At Ascend, we focus on the networks and systems most able to influence the lives of families. These include the trillions of dollars in public human services resources, community colleges, Head Start, United Ways, community action agencies, and community foundations, among others. Two-generation opportunities can be identified and developed through programs, policies, and research at all levels – local, state, and federal.

In the spotlight: The Women’s Foundation of Greater Birmingham is collaborating with Jefferson State Community College, Childcare Resources, Head Starts, local pharmaceutical stores, and a hospital to provide scholarships and career support for women who live below 200 percent of the federal poverty line. The program offers a fast-track postsecondary educational program that leads to higher wages, benefits, and opportunities for advancement as pharmacy technicians, and medical and ophthalmic assistants, in-demand careers in Birmingham, while also providing quality early education programs for their children.
EDUCATION

Investments in high-quality early childhood education yield a 7-10 percent per year return on investment based on increased school and career achievement as well as reduced social costs.¹

At the same time, parents who complete a college degree double their incomes.² A parent’s level of educational attainment is also a strong predictor of a child’s success.

In the spotlight: The United Way of Greater Cincinnati built a pilot program for low-income mothers to help them enter the field of advanced manufacturing, which is a growing employment sector in the region. They used a design-thinking approach to develop the career training program at Gateways Community College and involve their children in STEM learning. The program targets low-income mothers with at least one child age 12 or younger. Families set short- and long-term goals for their career, finances, education, and family. In addition to a peer support group and a STEM-focused family camp, families have access to an emergency assistance fund as they build their savings and support systems. The partnership has expanded to include other community organizations.

Return on investment in education for children AND their parents

education

• Postsecondary education and workforce development
• Early childhood development programs e.g. child care; Head Start; prekindergarten; home visiting; hubs of support for family, friend, and neighbor caregivers
• Family literacy
• K-12 education

College degree = 2X parent’s income

In the spotlight: The United Way of Greater Cincinnati built a pilot program for low-income mothers to help them enter the field of advanced manufacturing, which is a growing employment sector in the region. They used a design-thinking approach to develop the career training program at Gateways Community College and involve their children in STEM learning. The program targets low-income mothers with at least one child age 12 or younger. Families set short- and long-term goals for their career, finances, education, and family. In addition to a peer support group and a STEM-focused family camp, families have access to an emergency assistance fund as they build their savings and support systems. The partnership has expanded to include other community organizations.
Social capital is the **formal and informal networks** - of family, friends, neighbors, and institutions - through which people develop meaningful connections to build economic security.

These networks and the skills to build them are important contributors to families’ well-being. According to a recent survey, low-income mothers with children enrolled in child care centers were 40 percent less likely to be depressed than those whose children were not enrolled. The friendships mothers developed through the centers were also important sources of information and support.³

---

**In the spotlight:** Jefferson County Human Services is connecting education, health, mental health, job training, and other supports for Head Start children and their parents through 3rd grade. Critical to the model is the integration of a family-centered coaching approach, with a coach assigned to working with parents through monthly dinners and one-on-one goal-setting discussions to support parents in their pursuit of GEDs and postsecondary education and asset-building, among other areas, and to connect them to other community services. The program has successfully built social capital among the parents for peer support in achieving their goals.
Increased family income during early childhood can have a profound and lasting impact on children’s lives. A $3,000 difference in parents’ income when their child is young is associated with a 17 percent increase in the child’s future earnings.4 Yet nearly 45 percent of all children in the United States live in low-income families.5 Almost three-fourths of single-mother families with children are low-income. Beyond monthly incomes, savings and other financial assets are critical to help manage unexpected setbacks and build economic security. Children with as little as $1 to $499 in an account designated for college are more likely to enroll and graduate. Even small dollar amounts help children see themselves as college bound.6

**Children with Savings Accounts More Likely to Attend College**

**economic assets**

- Housing
- Transportation
- Financial education and asset building
- Tax credits
- Student financial aid
- Food assistance

**In the spotlight:** Led by Ascend Fellow Andrea Levere, the Corporation for Enterprise Development (CFED) works nationally and internationally on asset-building strategies for low-income families. CFED has been at the forefront of developing children’s savings accounts, financial tools that provide children and youth with savings to help them get ahead economically, and transform their aspirations for the future. The impact does not stop with children, however. The accounts are also a means to get low-income parents banked, increase their financial capability, and build their own long-term goals.
Health and well-being

Physical and mental health have a major impact on a family’s ability to thrive. Childhood trauma, for instance, has lasting health and social consequences.⁷

Recent brain research shows that the brains of new parents undergo major structural changes just as babies’ brains do. Understanding how parents are biologically prepared for their new roles is important to ensuring young families get off to a good start.⁸ Studies also show that parents with health insurance are more likely to seek regular care for themselves and their children.⁹

In the spotlight: Nurse-Family Partnership (NFP), led by Ascend Fellow Roxane White, is a maternal and early childhood program that fosters long-term success for first-time moms, their babies, and society through the support of caring maternal and child health nurses. In Indiana, the Nurse-Family Partnership program is carried out by Goodwill of Central Indiana. Under the leadership of Ascend Fellow Betsy Delgado, the program offers families employment, education, and wrap-around economic services that complement the health-focused expertise of the NFP nurses.
MEASURING IMPACT

As two-generation approaches have gained national traction over the last several years, “What are the intended outcomes of two-generation programs?” and “What are the pathways to these outcomes for two-generation programs?” have become gnawing questions for the field.

To help answer these questions, Ascend and the Annie E. Casey Foundation and a working group of field experts developed a report, Making Tomorrow Better Together, and an online 2Gen Outcomes Bank. Both are available on Ascend’s website.

Two-generation programs articulate and account for the outcomes of children and the adults in their lives. The graphic below outlines the continuum from a two-generation approach to a strategy and program.

The Two-Generation Approach, Strategy, Program Continuum

In the spotlight: The Colorado, Tennessee, and Utah Departments of Human Services, led by Ascend Fellows Reggie Bicha, Raquel Hatter, and Ann Silverberg Williamson respectively, have embraced two-generation strategies, enabling billions of dollars in public services and thousands of employees to serve families more holistically. They are bringing offices and data systems that serve families together and strengthening a culture of service and an appetite for change within their teams. Similar shifts are developing in Connecticut and Hawaii, with almost half of all states exploring two-generation approaches. Public will for efforts that address the needs of children and their parents together is also strong, with 89 percent of the American public across all demographics in favor of a two-generation approach.
HOW DO WE BUILD A LEGACY OF OPPORTUNITY?

Ascend at the Aspen Institute is the national hub for breakthrough ideas and collaborations that move children and the adults in their lives toward educational success and economic security. We embrace a commitment to racial equity and a gender lens.

How we make a difference:

- **We elevate and invest in solutions.**
  - Two-generation policy and practice agenda
  - Innovations from Aspen Institute Ascend Network
  - Practice and policy roundtables and forums
  - Products and tools to support adoption and adaptation of two-generation approaches

- **We build leaders and a national network.**
  - Aspen Institute Ascend Fellowship
  - Networked way of working to increase connectivity, alignment, and production across strategies

- **We leverage resources.**
  - Expansion and leveraging of funding and support for two-generation efforts as well as flexible resources

“I think the biggest thing for me is trying to figure out how I am going to take care of myself and how am I going to set my children up for success.”

- Low-income, white mother, Richmond, Virginia Focus Group
