Dear friends,

As Chairman of Orbis Canada, I am delighted to share the successes of the organization with you. Orbis Canada and its supporters have played an extremely important role in the achievements made globally in the fight to eradicate avoidable blindness.

Vision is a gift, it is a gift that at times we take for granted. But just for a moment, close your eyes and imagine living your life in darkness. Imagine doing some of the things you do regularly; grocery shopping or cleaning, getting dressed or caring for your child. These things become infinitely more difficult without vision.

Blindness takes away so much more than vision. It impedes people’s abilities to gain an education, it prevents them from finding employment, and it leads them and their families into a life of poverty. Sadly, for 285 million people, this is a reality.

It is for this reason, that Orbis continues to strive towards a world in which no one is needlessly blind. In 2015, our global programs trained 30,326 doctors, nurses and many other health care professionals who can now not only provide a better level of care but can also pass on their knowledge. We supported programs in which 65,508 adults and children received optical surgeries that either prevented blindness or restored vision. And finally, 2,125,401 screenings and examinations were conducted across three continents.

In 2015, our beloved DC-10 flew on its last project when it visited Vietnam. It was officially retired this year as we welcomed the launch of our third-generation Flying Eye Hospital in June. Many more details about this momentous occasion and what it means for vision care will be featured in our 2016 Annual Review.

Orbis’s life-transforming work is the result of many individual acts of kindness. This year, our generous supporters enabled us to commit more money to vital eye care programs than ever before, bringing us closer to our vision. We hope you enjoy reading some of the inspirational stories behind our work, the stories made possible because of you.

On behalf of Orbis Canada, thank you.

Peter Allen, FCPA, FCA, FRAeS
Chairman, Orbis Canada
Treasurer, Orbis International
Millions of people go blind each year – millions more suffer from poor vision – because they cannot get the care many of us take for granted.

Orbis is determined to change this and make VISION a reality for all. We train doctors, nurses and medical technicians to save and restore sight. We strengthen and improve eye health systems by partnering with local hospitals, public health agencies, NGOs and governments. We also advocate to make fighting blindness a priority.

In the worldwide programs supported by Orbis in 2015:

| Training Courses Completed by Ophthalmologists | 1,414 |
| Nurses, Biomedical Engineers, Health Staff, Community Workers Trained | 28,912 |
| Adult Eye Surgeries Performed | 41,281 |
| Pediatric Eye Surgeries Performed | 24,227 |
| Adult Eye Screenings and Examinations Performed | 652,088 |
| Pediatric Eye Screenings and Examinations Performed | 1,473,313 |
| Medical and Optical Treatments Performed | 2,029,487 |
FOCUS ON THE IMPACT

Using Orbis’s unique tools – over 400 expert volunteers, our Flying Eye Hospital and Cybersight, our online telemedicine tool, we equip medical professionals in developing countries with the skills, resources and knowledge to deliver quality eye care to their communities.

In 2015, we continued to span the globe to bring people together – expert surgeons and village doctors, community nurses and traditional healers, health ministers and community activists, global foundations and individual donors – working as one to make sure no one loses their sight to a preventable or treatable disease.

**ETHIOPIA**
**PROGRAM FOCUS:**
Trachoma Elimination, Comprehensive Services

**HIGHLIGHT:**
- Member of the National Trachoma Task Force.
- Initiated Rural Eye Care in Southern Ethiopia: establishing 105 primary clinics & supporting 6 secondary units & opening Tertiary Centers in Menelik, Gondor & Hawassa.
- Founded the Eye Bank of Ethiopia

**MONGOLIA**
**PROGRAM FOCUS:**
Model of excellence in modern ophthalmology; Comprehensive pediatric and adult network.

**HIGHLIGHT:**
- Provided training to 71 medical professionals (includes doctors, nurses, biomedical engineers, etc.)
- Conducted screening and eye examinations to 13,174 children.

**CHINA**
**PROGRAM FOCUS:**
Cataract, Children’s eye health, Diabetic retinopathy and Glaucoma

**HIGHLIGHT:**
- Conducted 230 Projects across 32 provinces.
- Trained 64,000 doctors and treated more than 1.7 million patients since 1982.
- Worked with the Ministry of Health of China on the public education of Diabetic retinopathy.

**PERU**
**PROGRAM FOCUS:**
Comprehensive Eye Care

**HIGHLIGHT:**
- Provided training through hands-on opportunities, workshops, and symposiums to 323 medical professionals (includes doctors, nurses, BMES, etc.)
- Conducted 309 eye examinations (adult + children), 128 of whom (adult + children) received additional treatment (surgery/ lasers/injections).
- Conducted eye examinations to 111 children, 32 of whom received additional treatment (surgery/ lasers/ injections).

**SOUTH AFRICA**
**PROGRAM FOCUS:**
Children’s Eye Health

**HIGHLIGHT:**
- Developed a state-of-the-art Pediatric Eye Care Center & a sustainable, comprehensive model for a pediatric eye care system.
- Since 2000, 31 Children’s Eye Centers have been developed with Orbis support across 17 states of the country.

**VIETNAM**
**PROGRAM FOCUS:**
Children’s Eye Health, 2 Flying Eye Hospital projects in 2015

**HIGHLIGHT:**
- Provided training through hands-on opportunities, workshops, and symposiums to 368 medical professionals (includes doctors, nurses, biomedical engineers, etc.)
- Conducted eye examinations to 330 patients, 147 of whom received additional surgeries.

**INDIA**
**PROGRAM FOCUS:**
Pediatric Blindness Prevention

**HIGHLIGHT:**
- Provided training through hands-on opportunities, workshops, and symposiums to 368 medical professionals (includes doctors, nurses, biomedical engineers, etc.)
- Conducted eye examinations to 330 patients, 147 of whom received additional surgeries.
FOCUS ON TRAINING
- COUNTRY PROGRAMS AND HOSPITAL BASED PROGRAMS (HBP)

Orbis focuses on increasing the skills and knowledge of our partners through training, and we take a team approach.

To make an impact on the entire eye health system in the developing countries, transferring from one doctor or nurse to an entire team of eye care professionals, Orbis has established long-term, multi-year projects, known as Country Programs, across 16 countries. We partner with local hospitals and clinics throughout the regions we serve to provide access to quality eye care. Many times, our Flying Eye Hospital programs are coordinated with the help of these trusted partners.

Integrated into the Country Program strategy are our Hospital Based Programs (HBPs). HBPs are not “stand alone” tools for skills and knowledge transfer, but one of several components of a long-term strategy for capacity building.

Our HBPs are defined by location and time, and designed to address a specific clinical training need. HBPs support a clear, deliverable outcome identified by the Orbis Program Manager based on the needs of our local partners. Orbis Volunteer Faculty (VF) is deployed to work within our partner institutions to transfer knowledge and skill in their local environment. The average duration of a HBP is 1-2 weeks but can be extended if the financial and human resources allow for it.

In 2015, Orbis conducted 32 HBPs around the world focusing on building human and institutional capacity. With each of these 32 HBPs we have successfully improved the overall quality of patient care while providing the necessary skill transfer.
CLOSE UP:
PEDIATRIC EYE HEALTH IN BANGLADESH

As part of our country program in Bangladesh, Orbis established the National Childhood Blindness Project (NCBP) in 2013, funded primarily by Canadian donors. Bangladesh has 51,200 blind children of which about 20,480 are due to avoidable causes (Bangladesh Childhood Blindness Study 2002). Additionally, 1.5 million children have refractive errors and about 153,600 children have low vision problems, of which about 78,336 cases are avoidable. This high prevalence of childhood blindness puts an additional burden on the country’s socio-economic health due to deprivation of basic eye care services.

Orbis has been working in Bangladesh since the Flying Eye Hospital conducted its first visit to train local ophthalmologists in microsurgery and state-of-the-art technology in eye care back in 1985.

In 1999, the Orbis Bangladesh office was established and the team has been implementing its long-term programs across the country to strengthen the existing ophthalmic infrastructure and provision of affordable and quality eye care services.

Prior to 2001, there was no specialized pediatric eye care service available. By bringing the knowledge and skills needed to local partners, Orbis helped to establish 7 pediatric eye care centres over the past ten years.

The National Childhood Blindness Project is the largest initiative in Bangladesh focusing on child eye care. The six-year national level project is aimed at increasing access to quality eye care for the children throughout Bangladesh in order to prevent and reduce avoidable causes of childhood blindness.

ONE OF THE MANY BENEFICIARIES

Rahul, 8, lives in Moulvibazar district with his family. His father is a carpenter and the whole family of seven depend on his limited income. Rahul’s right eye got injured while playing with friends. His father took him to a local doctor who referred Rahul to Moulvibazar BNSB Eye Hospital for better treatment. The Doctor examined his eyes and found that a cataract had formed in his right eye as a result of the trauma and advised surgery.

Initially, Rahul’s father was reluctant to proceed with the surgery due to the financial cost. But after the hospital assured him about Orbis’s support under National Childhood Blindness Project (NCBP) he happily agreed.

Rahul received surgery on September 10, 2015 and it was a great success. Rahul’s vision is now restored and he is living a regular life back at school and playing with his friends.

“Without your help my son would not be able get back his sight again and he might be blind for rest of his life.” – Rahul’s Father

COMPREHENSIVE EYE HEALTH FOR CHILDREN AND ADULTS IN AFRICA

Orbis Africa was established in 2010, with the head office in Cape Town, South Africa. Our programs cover regions in Cameroon, Ghana, Ethiopia, Zambia, South Africa, Kenya, Malawi, Rwanda, Tanzania and Uganda.

We recognise that while all eye health services across Sub-Saharan Africa are scarce, services for children are particularly rare. That’s why a significant part of our work focuses on child eye health. We manage two large initiatives in Sub-Saharan Africa: The Child Eye Health initiative focuses on a comprehensive model for child eye health in the region to strengthen existing services and establish new services; the Human Resources for Eye Health (HReH) Strengthening initiative, in partnership with IAPB Africa, supports the development of human resources to strengthen eye health in the region.

In 2015, Orbis Africa and our local partners have the following achievements -

| TRAINING COURSES COMPLETED BY OPTHALMOLOGISTS | 69 |
| NURSES, BIOMEDICAL ENGINEERS, HEALTH STAFF, COMMUNITY WORKERS TRAINED | 639 |
| EYE SURGERIES/LASER TREATMENTS WERE PERFORMED ON ADULTS AND CHILDREN. | 2,900 |
| MEDICAL AND OPTICAL TREATMENTS WERE CONDUCTED ON ADULTS AND CHILDREN. | 88,052 |
| SCREENINGS AND EXAMINATIONS WERE CONDUCTED. | 199,914 |

CLOSE UP:
VISION FOR XIANGLIN FROM RURAL CHINA

In the spring of 2015, Orbis Kids Sight Ambassador Esther Kwan visited two-year-old Han Xianglin who was born with a cataract and nystagmus. Since birth, Xianglin has needed several surgical treatments to stand any chance of being able to see clearly.

When we arrived at the toddler’s home, it was clear to see that his family was very poor. His mother has severe strabismus herself that not only prevents her from working, but also stops Xianglin’s father from traveling far for work. These factors greatly affect the family’s ability to earn money, exemplifying how visual impairment can trap families in the vicious cycle of poverty.

Xianglin’s first surgery took place in 2015, and in the second surgery, the Orbis trained doctor placed the clear artificial lens into his eye. When the anesthetic wore off and Xianglin began to wake up, the concern on his father’s face was replaced with a relieved smile. His mother, also overcome with relief, burst into tears when she saw him come around.

In 34 years of vision-saving in China, Orbis and our partners have completed 230 projects across 32 provinces, provided training to more than 43,730 eye health professionals, conducted over 130,000 pediatric and adult surgeries to restore sight.
Thanks to our supporters, we fly the world’s only ophthalmic teaching hospital on board an aircraft. It is a surgical and training facility, the result of a unique and lasting alliance forged between the medical and aviation industries.

In 2015 we saw our DC-10, in service since 1994, complete its last project. After 299 vision saving voyages, our second generation Flying Eye Hospital finished with a month long project training medical professionals in Trujillo, Peru. Before its final project, the Flying Eye Hospital spent a month in Vietnam visiting both Hue and Hanoi.

Our new MD-10, the third generation Flying Eye Hospital was launched in June of this year. You will be able to read more about the launch and its first project in Shenyang, China in the 2016 Review released early in 2017.
FOCUS ON CYBERSIGHT

In the past, a simple sequence of e-mail messages during a 1998 Orbis program to Havana, Cuba, developed into a full-fledged telemedicine program called CyberSight® in 2003.

Over the next decade, CyberSight® was strategically developed, becoming the preeminent telemedicine case consultation for ophthalmology with educational and formal learning courses being added in support of this activity.

Today, CyberSight® makes it possible for ophthalmologists in developing countries to benefit from the knowledge and experience of Orbis volunteers entirely online.

Cybersight® will be a portal that provides, not just the rural doctor, but also the entire ophthalmic team with a source for necessary materials and expert guidance to aid and further develop his or her professional skills.

Through CyberSight®, our goal is to establish innovative approaches to virtual education and adult learning. This goal includes exploring virtual forums, real-time telemedicine, and community learning models and video lectures to innovate within the current distance learning space. We aim to position CyberSight® as the premiere provider of patient care consultation and formal online education, offering the highest level of training, mentoring, and case support available to vision care providers in the developing world.

In the future, we foresee CyberSight® to be adaptable as a model for bringing resources and training to other healthcare challenges as well.

Without Cybersight in this moment I would be a different doctor and the life of my patients would be different.”

Dr. Daniela Eleonora Cioplean, MD. CV.
CyberSight user in Romania

CONSULT
Cybersight’s one-of-a-kind patient Consult program is its most advanced component. The store-and-forward infrastructure allows eye health workers to seek advice and one-on-one mentorship on patient cases. Cybersight Consult overcomes geographic or professional isolation and knowledge or skill gaps by leveraging the support of a global community of expert eye health professionals.

LIBRARY
Cybersight’s high-quality materials and recommendation software fills knowledge gaps, supplements/enhances training programs and reinforces face-to-face training. Courses are not only trusted, structured and credentialled, but also provide the potential for pre/post-intervention evaluation to support optimized program planning.

LEARN
Cybersight Resources provide users with free and unlimited access to select journals, textbooks, papers and more. Cybersight’s digital strategy uses the latest instructional design principles, to create and contribute high-quality content to the community. Organizations who choose to share their materials on Cybersight Resources benefit from Cybersight’s online learning advancements and increase their organization’s visibility or publicity on a global scale.

TELE-OPHTHALMOLOGY
Cybersight’s newest initiative will enable live surgical demonstrations and lectures to be broadcast from industry-leading institutions to organizations around the world.

A VISION SHARED

Orbis retains a dedicated global cadre of over 400 volunteer medical professionals to provide ophthalmic education and instruction to increase our partners’ skill, service and quality of patient care.

For 34 years, the keystone of Orbis’s work has been to teach and train eye health professionals to prevent and treat avoidable blindness. As our programming has evolved over the last three decades, so has the breadth and depth of our Volunteer Faculty pool.

Our global cadre is a comprehensive and diverse pool of experts that includes every subspecialty of ophthalmology, nursing, anesthesiology, biomedical engineering and ophthalmic technicians from 29 countries around the world, among which close to 40 are from Canada.

SPECIAL THANKS TO ORBIS CANADA’S VOLUNTEER FACULTY -

11 canadian volunteer medical professionals who took part in 12 Orbis projects in 7 countries during 2015:

Mrs. Maria Blackburn, Ophthalmic Assistant – Hospital based program – Cameroon

Dr. Ashley Brissette, Associate Ophthalmologist – DC-10 plane program – Vietnam

Dr. Matthew Bujak, Cornea & External Ocular Disease Specialist – Hospital based program – Uganda and Nepal

Mr. Leo de Kryger, Biomedical Engineer – DC-10 plane program – Vietnam

Dr. Peter Kertes, Retina Specialist – Hospital based program – China

Dr. Yasser Khan, Oculoplastic Specialist – DC-10 plane program – Vietnam

Mr. Marc Lafontaine, Ophthalmic Assistant – Hospital based program – Cameroon

Dr. Kim Le, Associate Ophthalmologist – DC-10 plane program – Vietnam

Dr. Brian Leonard, Vitreoretinal Specialist – DC-10 plane program – Vietnam

Ms. Leslie Mackeen, Medical Imaging Specialist – Hospital based program – Mongolia

Dr. Carlos Solarte, Paediatric Ophthalmology and Adult Strabismus Specialist – Hospital based program – Peru

Orbis Canadian Volunteer medical professionals in the field.
ALL FOR VISION
LOCAL ACTIVITIES ADVOCATING FOR VISION CARE, AND RAISE FUND FOR THE CAUSE.

THE HOSPITAL IN THE SKY:
OMEGA presented the documentary about Orbis - the hospital in the sky, which stared Cindy Crawford and shone a light on the life-changing treatments Orbis performed on young patients in Peru. The full version of the film can be watched at omegawatches.com/orbis.

In 2015 Orbis Canada was supported by numerous individuals, foundations, organizations, associations and student groups who shared our vision.

Apart from Orbis Canada’s Plane Pull for Sight, our community partners organized cause-related marketing events, dinners, galas, charity concerts, cocktail nights, silent auctions, mail promotions, campus promotions as well as many private events to raise funds and awareness for Orbis.

Thanks to all the supporters, we were able to bring Canadians together to save vision worldwide.
ORBIS CANADA FINANCIALS

In 2015, Orbis Canada’s financial performance shows that over $811 thousand dollars was generated in revenue and support. Overall, the organization finished the year with a net excess of $4 thousand dollars and total net assets of $512 thousand dollars.

Orbis Canada entered 2016 financially well-positioned to support the growth of the organization’s operations and to best serve its goal of transforming lives through eliminating avoidable blindness.

Special thanks to Orbis Canada’s donors

Orbis Canada’s ability to fight against blindness is the direct result of our donors’ compassion and generosity.

We are extremely grateful for every contribution, large or small. We hereby would like to express our special appreciation to the following donors for their exceptional support, and offer our deepest thanks to the thousands of donors who share our vision, and who help to make it come true.

With your help, we bring the world together to fight blindness.
